Phase I Environmental Site Assessment
Vallco Special Area Specific Plan Parcels
Cupertino, California

SECTION 1: INTRODUCTION

This report presents the results of the Phase I Environmental Site Assessment (ESA) performed for the Vallco Special Area Specific Plan Parcels in Cupertino, California (Site) as shown on Figures 1 and 2. This work was performed for David J. Powers & Associates in accordance with our January 8, 2018 Agreement (Agreement).

1.1 PURPOSE

The scope of work presented in the Agreement was prepared in general accordance with ASTM E 1527-13 titled, “Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process” (ASTM Standard). The ASTM Standard is in general compliance with the Environmental Protection Agency (EPA) rule titled, “Standards and Practices for All Appropriate Inquiries; Final Rule” (AAI Rule). The purpose of this Phase I ESA is to strive to identify, to the extent feasible pursuant to the scope of work presented in the Agreement, Recognized Environmental Conditions at the property.

As defined by ASTM E 1527-13, the term Recognized Environmental Condition means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not Recognized Environmental Conditions.

Cornerstone Earth Group, Inc. (Cornerstone) understands that David J. Powers & Associates is assisting the City of Cupertino in the preparation of an Environmental Impact Report (EIR) to study the environmental effects of potential development at the Site in compliance with the California Environmental Quality Act (CEQA). We performed this Phase I ESA to support David J. Powers & Associates in evaluation of Recognized Environmental Conditions at the Site. This Phase I ESA is intended to reduce, but not eliminate, uncertainty regarding the potential for Recognized Environmental Conditions at the Site.

1.2 BACKGROUND

The City of Cupertino is organized into 21 General Plan “Planning Areas,” consisting of nine “Special Areas” and 12 “Neighborhoods.” The project Site is the Vallco Shopping District Special Area (Vallco Special Area). The Site comprises approximately 70 acres, approximately 58 acres of which are developable. Most of the Site (approximately 50 acres) currently is developed with the Vallco Shopping Mall and associated parking facilities, and the remaining

acres are developed roadways, a 148-room hotel (currently under construction), and a surface parking lot.

The City of Cupertino is currently undertaking a community-based planning process to develop a Specific Plan for the Vallco Special Area. As defined in by state Government Code §65450, a specific plan is a tool for the systematic implementation of the general plan. It establishes a link between implementing policies of the general plan and the individual development proposal(s) in a defined area. Consistent with the adopted General Plan, the proposed Specific Plan would facilitate the development of 600,000 square feet of commercial uses, 2 million square feet of office uses, 339 hotel rooms, and 800 residential dwelling units on-Site. The Specific Plan could also include a 30-acre green roof and 65,000 square feet of civic spaces. The civic uses could include governmental uses and community meeting space. It is envisioned that 10,000 square feet of the 65,000 square feet of civic space would be for Science, Technology, Engineering, and Mathematics (STEM) lab use. The locations of the proposed land uses have not been finalized, and therefore, it is assumed that the uses could be placed anywhere within the Site. The City is considering three alternatives to the proposed Specific Plan and this report addresses the impacts of the proposed Specific Plan and Alternatives, described in the Table 1, below.

Table 1. Summary of Project and Project Alternative Development						
	Land Uses					
	Commercial (square footage)	Office (square footage)	Hotel (rooms)	Residential (dwelling units)	Green Roof (acres)	Civic Space (square feet)
Proposed Specific Plan	600,000	2,000,000	339	800	30	65,000 (10,000 of which would be for STEM lab use)
Project Alternatives						
General Plan Buildout with Maximum Residential Alternative	600,000	1,000,000	339	2,640	30	65,000 (10,000 of which would be for STEM lab use)
Retail and Residential Alternative	600,000	0	339	4,000	0	0
Occupied/Re-Tenanted Mall Alternative	1,207,774	0	148	0	0	0

It is anticipated that the Specific Plan could be constructed over 10 years. All existing improvements on-Site would be demolished. Demolition materials including concrete, asphalt, and base rock may be recycled and reused on-Site. The Site elevations would generally follow the existing topography in order to minimize grading, excavation, and reworking of the existing roadways. The maximum depth of excavation for the below-ground parking structures would be approximately 20 to 30 feet. It is anticipated that approximately 2 million cubic yards of soil would be excavated and hauled off-Site.

1.3 SCOPE OF WORK

As presented in our Agreement, the scope of work performed for this Phase I ESA included the following:

- A reconnaissance of the Site to note readily observable indications of significant hazardous materials releases to structures, soil or ground water.
- Drive-by observation of adjoining properties to note readily apparent hazardous materials activities that have or could significantly impact the Site.
- Acquisition and review of a regulatory agency database report of public records for the general area of the Site to evaluate potential impacts to the Site from reported contamination incidents at nearby facilities.
- Review of readily available information on file at selected governmental agencies to help evaluate past and current Site use and hazardous materials management practices.
- Review of readily available maps and aerial photographs to help evaluate past and current Site uses.
- Interviews with persons reportedly knowledgeable of existing and prior Site uses.
- Preparation of a written report summarizing our findings and recommendations.

The limitations for the Phase I ESA are presented in Section 10.

1.4 ASSUMPTIONS

In preparing this Phase I ESA, Cornerstone assumed that all information received from interviewed parties is true and accurate. In addition, we assumed that all records obtained by other parties, such as regulatory agency databases, maps, related documents and environmental reports prepared by others are accurate and complete. We also assumed that the boundaries of the Site, based on information provided by David J. Powers & Associates, are as shown on Figure 2. We have not independently verified the accuracy or completeness of any data received.

1.5 ENVIRONMENTAL PROFESSIONAL

This Phase I ESA was performed by Stason I. Foster, P.E. and Ron L. Helm, C.E.G., Environmental Professionals who meet the qualification requirements described in ASTM E 1527-13 and 40 CFR 312 § 312.10 based on professional licensing, education, training and experience to assess a property of the nature, history and setting of the Site.

SECTION 2: SITE DESCRIPTION

This section describes the Site as of the date of this Phase I ESA. The location of the Site is shown on Figures 1 and 2. Tables 1 through 3 summarize general characteristics of the Site and adjoining properties. The Site is described in more detail in Section 7, based on our on-Site observations.

2.1 LOCATION AND OWNERSHIP

Table 2 describes the physical location, and ownership of the property, based on information provided by David J. Powers & Associates. The Site is located in the City of Cupertino on both sides of North Wolfe Road between Vallco Parkway and Interstate 280 (I-280) on the east side and between Stevens Creek Boulevard and I-280 on the west side. An enclosed, pedestrian bridge connects the mall buildings on the east and west sides of North Wolfe Road.

Table 2. Location and Ownership

Assessor's Parcel No. (APN)	Address	Owner	Approximate Lot Size (acres)
316-20-080	10101 N. Wolfe Road, and 19621 and 19623 Stevens Creek Blvd.	Vallco Property Owner, LLC (Sand Hill Property Company)	12.58
316-20-081	10101 N. Wolfe Road		3.73
316-20-088	10333 N. Wolfe Road	Simeon/Wolfe Properties	5.12
316-20-092	10380 Perimeter Road	KCR Development	2.12
316-20-094	10150 N. Wolfe Road	Vallco Property Owner, LLC (Sand Hill Property Company)	9.98
316-20-095	10123 N. Wolfe Road		2.71
316-20-099	10330 N. Wolfe Road		0.9
316-20-100	10123 N. Wolfe Road		3.35
316-20-101	10123 and 10133 N. Wolfe Road		4.51
316-20-103	NA		1.85
316-20-104	10343 N. Wolfe Road		1.04
316-20-105	10123 N. Wolfe Road		0.68
316-20-106	10123 N. Wolfe Road		3.27
316-20-107	10123 N. Wolfe Road		5.5

2.2 CURRENT/PROPOSED USE OF THE PROPERTY

The current and proposed uses of the property are summarized in Table 3.

Table 3. Current and Proposed Uses

Current Use	Vallco Shopping Mall, parking garages and at-grade parking lots, and a hotel (currently under construction). Most mall tenant spaces are vacant, except for an AMC movie theater, two restaurants (Dynasty and Benihana), Bay Club fitness center, a bowling alley (Bowlmore) and an ice skating rink (Cupertino Ice Center).
Proposed Use	Mixed use development

2.3 SITE SETTING AND ADJOINING PROPERTY USE

Based on our Site vicinity reconnaissance, the surrounding land uses include residential and commercial uses to the west, I-280 to the north (and hotel, residential, and office uses north of I-280), commercial, office, and residential mixed-use to the east, and commercial uses to the south.

SECTION 3: USER PROVIDED INFORMATION

The ASTM standard defines the User as the party seeking to use a Phase I ESA to evaluate the presence of Recognized Environmental Conditions associated with a property. For the purpose of this Phase I ESA, the User is David J. Powers & Associates. The “All Appropriate Inquiries” Final Rule (40 CFR Part 312) requires specific tasks be performed by or on behalf of the party seeking to qualify for Landowner Liability Protection under CERCLA (*i.e.*, the User).

Per the ASTM standard, if the User has information that is material to Recognized Environmental Conditions, such information should be provided to the Environmental Professional. This information includes: 1) specialized knowledge or experience of the User, 2) commonly known or reasonably ascertainable information within the local community, and 3) knowledge that the purchase price of the Site is lower than the fair market value due to contamination. A search of title records for environmental liens and activity and use limitations also is required.

3.1 ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

An environmental lien is a financial instrument that may be used to recover past environmental cleanup costs. Activity and use limitations (AULs) include other environmental encumbrances, such as institutional and engineering controls. Institutional controls (ICs) are legal or regulatory restrictions on a property’s use, while engineering controls (ECs) are physical mechanisms that restrict property access or use.

The regulatory agency database report described in Section 4.1 did not identify the Site as being in 1) US EPA databases that list properties subject to land use restrictions (*i.e.*, engineering and institutional controls) or Federal Superfund Liens or 2) lists maintained by the California Department of Toxic Substances Control (DTSC) of properties that are subject to AULs or environmental liens where the DTSC is a lien holder.

ASTM E 1527-13 categorizes the requirement to conduct a search for Environmental Liens and AULs as a User responsibility. A search of land title records for environmental liens and AULs was not within the scope of the current Phase I ESA.

3.2 SPECIALIZED KNOWLEDGE AND/OR COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

Based on information provided by or discussions with David J. Powers & Associates, we understand that David J. Powers & Associates does not have specialized knowledge or experience, commonly known or reasonably ascertainable information regarding the Site, or other information that is material to Recognized Environmental Conditions except for the information contained in the provided reports described in Section 3.3.

3.3 DOCUMENTS PROVIDED BY DAVID J. POWERS & ASSOCIATES

To help evaluate the presence of Recognized Environmental Conditions at the Site, Cornerstone reviewed and relied upon the documents provided by David J. Powers & Associates listed in Table 4. Please note that Cornerstone cannot be liable for the accuracy of the information presented in these documents. ASTM E1527-13 does not require the Environmental Professional to verify independently the information provided; the Environmental Professional may rely on the information unless they have actual knowledge that certain information is incorrect. A summary of the provided documents is provided below; please refer to the original reports for complete details (Appendix E).

June 26, 2014b	WSP Services, Inc.	Limited Phase I Environmental Site Assessment of Sears/Bay Club Facilities in the Vallco Shopping Center, Cupertino, California.
January 11, 2016	WSP Services, Inc.	Updated Information to the January 7, 2014 Phase I Environmental Site Assessment of Vallco Mall in Cupertino, California.

3.3.1 Reported Site History

Based on information contained in the provided prior reports, the Site historically was occupied by farmhouses and used for agricultural purposes since at least 1939. A Sears department store and an associated automotive center building reportedly were constructed on-Site by 1970, and the remaining Vallco mall structures were constructed between approximately 1974 and 1979. At the time of the Phase I ESA (WSP, 2014a), the shopping mall reportedly had approximately 110 tenant spaces with a vacancy rate of approximately 38 percent. Macys, Sears and JC Penney were listed as anchor tenants. Two detached on-Site buildings located north of the shopping mall were occupied by restaurants (TGI Fridays and Alexander's Steakhouse). The Mall reportedly underwent significant renovations in 1988 and 2006. In 2006, two new parking structures were constructed, additional retail stores were added along the west side of Wolfe Road, and the AMC movie theatre was added to the third level of the mall. In 2012, Sears renovated their store, and the Bay Club, a fitness facility, was established in the southeast corner of the Sears building.

3.3.2 Reported Hazardous Materials Use

The various prior retail tenants and restaurants within the mall reportedly handled and stored a variety of retail materials, products, and foodstuffs unique to their places of business. WSP stated that no major quantities of chemicals or hazardous materials were stored on-Site at the time of the Phase I ESA (2014a). Landscape maintenance was noted to be performed under a contract with Petalon, and on-Site escalators and elevators were reported to be maintained under a contract with KONE. A maintenance supply room was reported to contain a flammable

materials storage cabinet containing numerous household size containers of paint, stains, and lacquers, as well as other common maintenance supplies. The Phase I ESA (2014a) did not identify any significant staining or stressed vegetation on-Site.

WSP indicated that although the Site is listed as being a RCRA small quantity generator of hazardous waste, no hazardous wastes reportedly are routinely generated at the mall. WSP stated that the listing likely resulted from previous tenants (Expressly Portraits, Fox Photo, Inc., Kits Camera, and The Picture People, Inc.) that were engaged in photo developing activities that generated hazardous waste. Chemicals for treatment of water in a whirlpool were reportedly stored on the portion of the rooftop above the Bay Club (WSP, 2014b). General solid wastes and trash reportedly are disposed in dumpsters and compactors located on-Site. Various materials are separated for recycling. The dumpsters and recyclable materials were noted to be serviced by Recology.

Although the Sears Automotive Center currently is unoccupied, WSP reported that in 2014 bulk product oil was stored in aboveground contained tanks within the eastern portion of the Automotive Center building. Waste oils were contained within an aboveground storage tank (AST), and several drums of oils and lubricants within containment were stored in the same area. The Automotive Center was noted to store tires, batteries, and small quantities of retail oils and lubricants in the basement. Hydraulic lifts were reported to be present within the building, and several unidentified surface caps for access to potential below ground equipment installations were noted by WSP in the paved parking area south of the Automotive Center (these features were observed by Cornerstone to be located on the east side of the building and are further discussed in Section 7.2).

Four gasoline and two motor oil underground storage tanks (USTs) reportedly were removed from the Sears Automotive Center in 1985; associated dispenser islands and product lines were removed from the Site in 1994. Additionally, a 350-gallon diesel UST and a 350-gallon waste oil UST at JC Penney reportedly were removed from the Site in 1989. A 750-gallon oil-water separator at JC Penney also was closed in-place in 1994.

Following various soil and ground water quality studies, and soil removal activities, the leaking underground storage tank (LUST) cases at JC Penney and Sears were closed by the Santa Clara Valley Water District (SCVWD) in 1994 and 1999, respectively. WSP (2014a) concluded that these LUST cases represent historical recognized environmental conditions (RECs), and recommended that *any future subsurface disturbance in the areas of the former LUSTs at the Sears Automotive Center and the JC Penney locations should be performed with care with an awareness of the past releases in these areas.* The LUST cases and the Sears Automotive Center area discussed further in subsequent sections of this Phase I ESA.

WSP (2014b), which focused on the Sears property, provided a similar recommendation and stated that *because of the former presence of the underground storage tanks, the hydraulic lifts currently in use, and the possibility of underground installations, any future disturbance or investigation in the area of the Sears Automotive Center (removal of the building and/or excavation) should be performed with care and an awareness of the potential for petroleum or chemical releases in these areas.*

WSP (2016) indicated that the Sears retail operations and Automotive Center were closed and vacated as of October 4, 2014, and that JC Penny was expected to close by April 2016. WSP (2016) recommended that *the closure activities of these premises be monitored and coordinated with the Santa Clara Fire Department to ensure that no residual hazardous materials or*

contaminants remain following closure. Any remaining ground water monitoring wells or other subsurface sumps/separators should be properly abandoned or removed as part of the closure activities. The preparation of a Soil Management Plan for all redevelopment activities was additionally recommended to provide the protocols for proper sampling, handling, and reuse or disposal of excavated soils, and screening of imported fill materials before their import or use on the property.

SECTION 4: RECORDS REVIEW

4.1 STANDARD ENVIRONMENTAL RECORD SOURCES

Cornerstone conducted a review of federal, state and local regulatory agency databases provided by Environmental Data Resources (EDR) to evaluate the likelihood of contamination incidents at and near the Site. The database sources and the search distances are in general accordance with the requirements of ASTM E 1527-13. A list of the database sources reviewed, a description of the sources, and a radius map showing the location of reported facilities relative to the project Site are attached in Appendix A.

The purpose of the records review was to obtain reasonably available information to help identify Recognized Environmental Conditions. Accuracy and completeness of record information varies among information sources, including government sources. Record information is often inaccurate or incomplete. The Environmental Professional is not obligated to identify mistakes or insufficiencies or review every possible record that might exist with the Site. The customary practice is to review information from standard sources that is reasonably available within reasonable time and cost constraints.

4.1.1 On-Site Database Listings

Several past Site occupants were listed on various regulatory agency databases. The listings appear generally consistent with the reported history and past occupancy of the Site as summarized in Section 3.3. Sears Automotive Center and JC Penney were listed as closed LUST cases, and on other databases related to the use and storage of hazardous materials.

Sears was identified on the Statewide Environmental Evaluation and Planning System (SWEEPS) UST database, which lists seven USTs at Sears including four gasoline and two motor oil USTs, and a 1,000 gallon waste oil UST. As previously discussed, four gasoline and two motor oil USTs were removed in 1985; the 1,000 gallon waste oil UST is not discussed in the SCVWD case closure documents. Sears Automotive Center also was listed on a County database of facilities that operate ASTs; a total AST capacity of 1,800 gallons was noted.

Vallco Fashion Park was listed in the California Hazardous Material Incident Report System (CHMIRS) database, which contains information on reported hazardous material incidents (accidental releases or spills). The listing indicates that 18 gallons of non-PCB mineral oil was released to on-Site pavements and a storm drain in 1999 as a result of a traffic accident involving a PG&E vehicle that was transporting a transformer. The spill reportedly was contained and cleaned. A second CHMIRS listing indicates that 50 gallons of hydraulic fluid were released to grease traps and possible to the sanitary sewer in 2014. The spill reportedly was contained and cleaned. These incidents appear unlikely to have significantly impacted the Site.

Macy's additionally was listed in the CHMIRS database and on the Emergency Response Notification System (ERNS) database resulting from a reported 1 gallon spill of mineral oil from a failed PG&E transformer in 1999. The spill was noted to have been cleaned by the responsible party. Ceres (2006) stated that PG&E indicated that PCBs were removed from transformers in the area in the late 1970s and early 1980s. However, the ERNS listing identifies the material spilled at "Oil, Misc: Transformer (PCB: 92 ppm)." The ERNS listing additionally indicates that contaminated soil was removed. Based on the reported small volume of oil spilled and the report that impacted soil was removed, this incident appears unlikely to have significantly impacted the Site.

Expressly Portraits was listed on the ERNS database resulting from a spill in 1996 of liquid waste containing silver (5 gallons) into secondary containment. This incident appears unlikely to have significantly impacted the Site.

Macy's and JC Penney also were listed on the Emissions Inventory (EMI) database, which contains toxics and criteria pollutant emissions data collected by the California Air Resources Board and local air pollution agencies. These listings appear likely to have been associated with the operation of diesel fueled emergency generators at these businesses.

Vallco Shopping Mall, JC Penney, Macy's, R Jacobs Group, Bath & Body Works, Ice Center Enterprises, Fox Photo, Kits Camera, Expressly Portraits and The Picture People were identified at the Site addresses on the HAZNET database, which contains data extracted from the copies of hazardous waste manifests received each year by the DTSC. Listed wastes disposed from the Site were categorized as other organic solids, laboratory waste chemicals, material containing PCBs, unspecified organic liquid mixture, latex waste, oxygenated solvents, inorganic solid waste, asbestos containing waste, unspecified alkaline solution, oil-containing waste, metal sludge and photochemical/photoprocessing waste.

Kits Camera, The Picture People, Sears and Vallco Fashion Park were identified on a Resource Conservation and Recovery Act (RCRA) database as Small Quantity Generators (SQGs) of hazardous waste. No violations were noted.

4.1.2 Nearby Spill Incidents

Based on the information presented in the agency database report, no nearby off-Site spill incidents were reported that appear likely to significantly impact soil, soil vapor or ground water beneath the Site. The potential for impact was based on our interpretation of the types of incidents, the locations of the reported incidents in relation to the Site and the assumed ground water flow direction.

4.1.3 Further Review of Database Listings

To obtain additional information regarding the on-Site LUST cases at the Sears Automotive Center and JC Penney, a cursory review of readily available documents obtained from the state Geotracker (<http://geotracker.waterboards.ca.gov>) databases was performed. Geotracker is a database and geographic information system (GIS) that provides online access to environmental data. It tracks regulatory data about leaking underground storage tank (LUST), Department of Defense, Site Cleanup Program and Landfill sites.

Brief summaries of the Sears Automotive Center and JC Penney LUST cases are presented below.

4.1.3.1 JC Penney Store No. 427, 10150 Wolfe Road

Two 350 gallon diesel USTs and one 500 gallon waste oil UST were previously located on-Site. The first diesel UST was used for several years and then abandoned in place in 1985 when a leak was suspected. The second diesel UST was installed adjacent to the first UST within a 4-inch thick concrete vault in 1985. In 1989, water was observed in the second UST, and it was taken out of service. The 500 gallon waste oil UST presumably was used until 1985, when the associated JC Penney automotive maintenance facility ceased operations.

The three USTs were emptied, excavated, and removed in 1989. Soil samples collected directly beneath the diesel tanks contained Total Petroleum Hydrocarbons as diesel (TPHd) at concentrations up to 6,600 milligrams per kilogram (mg/kg). Soil samples collected from beneath the waste oil UST contained TPH as oil (TPHo) at concentrations up to 1,400 mg/kg and TPH as diesel at concentrations up to 71 mg/kg. The Water Board's Tier 1 Environmental Screening Levels (ESLs)¹ for TPHd and TPHo are 230 mg/kg and 5,100 mg/kg, respectively.

Soil removal reportedly was subsequently performed at each UST excavation. Approximately 78 tons of soil were removed from the diesel UST excavation; TPHd reportedly was not detected above laboratory reporting limits in confirmation soil samples collected after soil removal.

Approximately 225 tons of soil were removed from the waste oil UST excavation; one soil sample collected at an approximate depth of 8 feet in the waste oil UST excavation contained total oil and grease (TOG) at a concentration of 3,800 mg/kg. Analyses of other confirmation soil samples collected from the waste oil tank excavation contained TOG at up to 110 mg/kg and TPHd at up to 14 mg/kg. During removal of the waste oil UST, an oil/water separator was observed along the south wall of the excavation. The oil/water separator was not removed due to concerns for the structural integrity of the nearby building. Analyses of soil samples collected below the separator reportedly did not detect TPHg, TPHd, TOG or BTEX compounds. In 1994, the 750 gallon separator was steam cleaned and closed in place by filling it with cement grout under County Fire Department oversight.

A ground water monitoring well (MW-1) was installed in 1990 near the excavations. TPHd was detected at concentrations at up to 0.2 milligrams per liter (mg/L) in ground water samples collected from MW-1 in 1990; its ground water ESL is 0.1 mg/L. Three additional ground water monitoring wells (MW-2, 3 and 4) were installed later in 1990, and a ground water monitoring program was implemented between 1990 and 1993. Analyses of ground water samples collected during 1992 and 1993 typically did not detect TPHd or benzene, toluene, ethylbenzene or xylenes (BTEX) compounds at concentrations exceeding their respective laboratory reporting limits. Ground water was reported at depths between approximately 120 and 140 feet. A perched water bearing zone also was noted between depths of approximately 80 and 95 feet; this zone reportedly was not consistently encountered at the Site.

In 1992, supplemental investigations were performed to evaluate soil quality relating to the removed diesel and waste oil USTs. One boring was advanced to an approximate depth of 115 feet in the vicinity of the former diesel USTs. Soil samples from various depths were analyzed

¹ Environmental Screening Levels (San Francisco Bay, Regional Water Quality Control Board, February 2016) are used to screen sites for potential human health concerns where releases of hazardous chemicals to soil have occurred. ESLs are risk-based concentrations derived from standardized equations combining exposure information assumptions with toxicity data. Under most circumstances, the presence of a chemical in soil at concentrations below the corresponding screening level can be assumed not to pose a significant health risk.

for TPHd and BTEX compounds; these compounds were not detected above laboratory reporting limits. Nine borings were advanced in the vicinity of the former waste oil UST. Selected soil samples from the nine borings were analyzed for TOG, total recoverable petroleum hydrocarbons (TRPH), TPHd, TPH as gasoline (TPHg), and BTEX compounds. TOG was detected in soil samples at concentrations up to 4,010 mg/kg. TRPH was detected in one soil sample at a concentration of 240 mg/kg. The TOG concentrations detected were significantly higher than TRPH detections, which potentially may indicate that a large portion of the detected TOG concentrations may be caused by naturally occurring organic matter, not by the petroleum releases from the removed USTs.

The SCVWD stated that it appears that the extent of soil contamination has been sufficiently defined and that contaminated soil has been effectively removed, with the exception of 3,800 mg/kg of TOG detected in the sidewall of the waste oil UST excavation. The SCVWD also stated that the residual soil contamination does not appear to pose a significant threat to ground water. The SCVWD issued a case closure letter in September 1994. The case closure letter noted that Water District Ordinance 90-1 requires that the four ground water monitoring wells be properly destroyed when they are no longer in use.

4.1.3.2 Sears Automotive Center, 10101 North Wolfe Road

In 1985, two 12,000 gallon gasoline USTs, two 5,000 gallon gasoline USTs, and two 550 gallon oil USTs were removed from the Site. Soil samples were collected from the edge of the concrete UST anchoring slabs (four samples from the gasoline UST excavation and one sample from the oil UST excavation). Laboratory reports were not available within the records reviewed; however, hand written notes indicate that 4.7 and 19.6 mg/kg were detected in two soil samples from the gasoline UST excavation (14 foot depth). These concentrations presumably represent TPHg; the specific analyses conducted were not described.

In October 1994, the dispenser islands, product piping and vent lines associated with the gasoline USTs were removed. Subsequent soil sampling revealed petroleum hydrocarbon contamination above laboratory reporting limits in 5 of 20 soil samples collected from the gasoline UST piping area and in 4 of 5 soil samples collected from the oil UST piping area.

- TPHg was detected above laboratory reporting limits in 3 of 25 soil samples analyzed at concentrations ranging between 25 mg/kg and 3,000 mg/kg. The detected concentrations of TPHg exceeded the Water Board's Tier 1 ESL for TPHg (100 mg/kg) in 1 of the 25 samples (sample 2AST).
- Benzene was detected above laboratory reporting limits in 5 of 25 soil samples at concentrations ranging between 0.009 mg/kg and 2.4 mg/kg. The detected concentrations of benzene exceeded its residential DTSC-SL² (0.33 mg/kg) in 1 of the 25 samples (sample 2AST).
- TRPH was detected above laboratory reporting limits in 4 of 5 soil samples analyzed at concentrations ranging between 1 mg/kg and 1,300 mg/kg. The detected

² BTEX concentrations were compared to screening levels established by the California Department of Toxic Substances Control (DTSC) Human and Ecological Risk Office (HERO) (DTSC-SLs, January 2018). As recommended by the DTSC, US EPA Regional Screening Levels (RSLs) were used for analytes for which no DTSC-SLs have been established.

concentrations of TRPH do not exceeded the Water Board's Tier 1 ESL for TRPH of 5,100 mg/kg.

- Toluene was detected in 4 of 25 soil samples at up to 16 mg/kg, which does not exceed the residential DTSC-SL (1,100 mg/kg).
- Ethylbenzene was detected in 3 of 25 soil samples at up to 23 mg/kg. The detected concentrations of ethylbenzene exceeded its residential RSL (5.8 mg/kg) in 1 of 25 soil samples (sample 2AST).
- Xylenes were detected in 3 of 25 soil samples at up to 150 mg/kg, which does not exceed the residential RSL (580 mg/kg).

In November 1994, approximately 4.5 cubic yards of soil reportedly was removed from the location of sample (2AST) in which the greatest concentrations of TPHg, benzene and ethylbenzene were previously reported. Analyses of a second samples collected following the soil removal work did not detect TPHg or BTEX compounds.

At the request of the SCVWD, a supplemental investigation was performed in 1999 to assess the potential for ground water contamination from the removed USTs. Seven direct push borings were advanced to approximate depths of 22 to 44 feet. Soil samples were collected, and the deepest sample from each boring was submitted for laboratory analysis. Low concentrations of ethylbenzene and xylenes (below their respective residential RSLs) were detected in one soil sample; benzene, toluene, TPHg, and Methyl tert Butyl Ether (MtBE)/fuel oxygenates were not detected above their respective laboratory reporting limits. Ground water was not encountered. One of the seven borings (GP-6) was advanced near the location of former sample (2AST) in which the greatest concentrations of TPHg, benzene and ethylbenzene were previously reported. These analytes were not detected in the soil sample analyzed from GP-6 collected from a depth of 22 feet.

In December 1999, the SCVWD issued a case closure letter indicating that no further action related to the UST release is required.

Note that the UST removal report (Blain Tech Services, 1985) and the SCVWD case closure summary (1999) indicate that the two 550 gallon USTs contained new motor oil, which also is consistent with the SWEEPS UST database listings and a building plan reviewed by Cornerstone at the County Fire Department. As discussed below in Section 4.2, the building plan depicts two adjacent 500³ gallon new oil USTs and a nearby 1,000 gallon waste oil UST. Some reports prepared subsequent to the 1985 UST removals, however, depict one of the 550 gallon USTs as having contained waste oil, which appears to be incorrect. As previously noted, the 1,000 gallon waste oil UST is not discussed in the SCVWD case closure documents.

Additionally, inspection notes from October 1994 prepared by the County Fire Department indicate that two 1½ inch diameter oil pipes and a 3 inch diameter waste oil pipe were pressure tested and subsequently abandoned in place by filling them with concrete. These pipes presumably lead to the waste oil and two new oil USTs that were located on the west side of the building.

³ These appear to have been referenced as 550 gallons in the UST removal documents and subsequent reports.

4.2 ADDITIONAL ENVIRONMENTAL RECORD SOURCES

The following additional sources of readily ascertainable public information for the Site also were reviewed during this Phase I ESA.

4.2.1 City and County Agency File Review

Cornerstone requested available files pertaining to the Site at the following public agencies: the Cupertino Building Department, Santa Clara County Fire Department (FD), and the Santa Clara County Department of Environmental Health (DEH).

The building department files contained a very large volume of records pertaining to the Site that appeared to be related mainly to tenant improvement conducted by occupants of the mall. No records indicative of Recognized Environmental Conditions were readily apparent within the Building Department files; however, due to the large volume of records, only a cursory review was feasible within the time and budget constraints of this Phase I ESA.

The information reviewed at the FD and DEH that pertains to hazardous material use and storage at the Site is summarized in Table 5.

Table 5. File Review Information

Agency Name	Date	Occupant	Remarks
10101 North Wolfe Road			
FD	1969	Sears Auto Center	Building plans depict several features associated with the auto center building including 1) two adjacent 500 gallon new oil USTs and a nearby 1,000 gallon waste oil UST located west of the building, 2) a sump pump in the southwest corner of the building's basement, 3) multiple hydraulic vehicle lifts, 4) a battery storage room with drains leading to a below ground neutralization chamber located east of the building, 5) a below ground sand and grease interceptor located east of the building, 6) grease, oil and transmission fluid distribution piping throughout the interior of the building, 7) an elevator within the southeast portion of the building, and 8) two 10HP air compressors within the northeast corner of the basement.
FD	1986	Sears	A contract dated June 12, 1986 between Sears, Roebuck and Company and K.E. Curtis Construction Company for the removal of a 500 gallon UST. No details regarding the contents or location of the UST were described in the contract.

Table 5 (Continued). File Review Information

Agency Name	Date	Occupant	Remarks
10101 North Wolfe Road			
FD	Various	Sears Auto Center	Hazardous materials inventories indicate that various automotive related hazardous materials were stored on-Site included oils, transmission fluid, brake fluid, antifreeze, lead-acid batteries, and refrigerants, among others. These materials were noted to be contained in drums and ASTs. Wastes generated at the site were noted to include waste oil, waste gasoline, used oil filters, used batteries, waste antifreeze, and waste from a below grade oil/water separator, among others.
DEH	1991, 1993, 1999, 2003, 2007 and 2010	Sears Auto Center	<p>Inspection reports noting multiple violations including unlabelled waste containers, open containers, improper recordkeeping, improper management of lead wheel weights, lack of proper training and lack of secondary containment.</p> <p>The presence of an oil/water separator is noted that reportedly was connected to four floor drains within the auto service shop.</p> <p>A spill of hydraulic oil was noted near a dumpster on the west side of the facility in 1991. Cleanup was required. In 1999, an area of etched concrete and chemical residue from "battery acid and neutralizing" was noted outside of a service bay.</p>
FD	1996-1999	Jiffy Lube	Jiffy Lube is noted to have operated within the northern portion of the auto service building between 1996 and 1999. The facility is noted to have used seven ASTs with capacities between 150 and 500 gallons for storage of motor oils, transmission fluid, antifreeze, used oil and used antifreeze.
DEH	2004 and 2007	Sears Auto Center	Chemical inventories. Listed items are generally consistent with FD records summarized above.
FD	2012-2015	Bay Club	Pool treatment chemicals (calcium hypochlorite and muriatic acid) were noted to be stored in a roof-top shed.
10333 North Wolfe Road			
FD	1998-2012	Macy's	Permits and correspondence indicate that a diesel fueled emergency generator with a 75 gallon double walled AST was present on the building roof.
DEH	2004	Macy's	Hazardous waste inventory listing broken and damaged cosmetic products.
DEH	2008	Macy's	Inspection report noting violations including an unlabeled waste drum and lack of proper recordkeeping.
DEH	2014	Macy's	Hazardous waste inventory listing returned/expired cosmetic waste and fragrances.

Table 5 (Continued). File Review Information

Agency Name	Date	Occupant	Remarks
10150 North Wolfe Road			
FD	1998-2012	JC Penney	Inspection reports and chemical inventories document the presence of a diesel fueled emergency generator with a 25 gallon, double walled AST located on the second floor within the eastern portion of the building. Diesel also was noted to be stored within a double contained 55-gallon drum in 1998. Refrigerants (Freon 11), cooling water treatment products (corrosion inhibitors), miscellaneous maintenance and custodial products, and paints also were noted to be present.
DEH	2012 and 2016	JC Penney	Chemical inventories listing diesel fuel (150 gallons), along with unspecified corrosives, aerosols, flammables, oxidizers, paints and maintenance products, among others. Waste bulbs, batteries and non-PCB ballasts were noted to be generated.
10123 North Wolfe Road			
FD and DEH	1991-2016	Vallco	Permits, inspection reports and chemical inventories document the presence of a diesel fueled emergency generator with a 170 gallon, double walled AST located in a generator room.
DEH	1992, 1993, 1996, 1999 and 2001	Expressly Portraits	Inspection reports indicate that the facility generated waste photo processing chemicals. Violations associated with recordkeeping, training and container labeling were noted.
FD	1993-2008	Ice Chalet	Chemical inventories document the presence of Freon 22 (10,000 cubic feet) and refrigerant oil (600 gallons).
FD	1993-2001	Kits Cameras/ Ritz Cameras/ Expressly Portraits	Chemical inventories document the presence photo processing chemicals (fixers, stabilizers and developers, etc.).
DEH	2003	The Picture People	Inspection report and correspondence indicate that the facility generated waste photo processing chemicals (705 gallons in 2003). Violations associated with recordkeeping were noted.
DEH	2014	Vallco Mall	Various correspondence indicate that a fire in an elevator pump room on the third floor was extinguished by sprinklers and resulted in oily water being discharged in the vicinity of the pump room and to underlying areas on the second and first floors. It was reported that no impacts to soil or storm drains occurred, and that the release was cleaned up by a restoration contractor.

SECTION 5: PHYSICAL SETTING

We reviewed readily available geologic and hydrogeologic information to evaluate the likelihood that chemicals of concern released on a nearby property could pose a significant threat to the Site and/or its intended use.

5.1 RECENT USGS TOPOGRAPHIC MAP

A 1995 USGS 7.5 minute topographic map was reviewed to evaluate the physical setting of the Site. The Site's elevation ranges from approximately 175 to 195 feet above mean sea level; topography in the vicinity of the Site slopes downward gently to the northeast towards the San Francisco Bay.

5.2 HYDROGEOLOGY

During prior studies at JC Penney, ground water was reported at depths between approximately 120 and 140 feet. A perched water bearing zone also was noted between depths of approximately 80 and 95 feet; this zone reportedly was not consistently encountered at the Site. Based on information presented in the California Geotracker database pertaining to nearby properties, ground water depths between approximately 70 and 90 feet have been reported in the Site vicinity. Regionally, ground water likely flows to the northeast.

SECTION 6: HISTORICAL USE INFORMATION

The objective of the review of historical use information is to develop a history of the previous uses of the Site and surrounding area in order to help identify the likelihood of past uses having led to Recognized Environmental Conditions at the property. The ASTM standard requires the identification of all obvious uses of the property from the present back to the property's first developed use, or back to 1940, whichever is earlier, using reasonably ascertainable standard historical sources.

6.1 HISTORICAL SUMMARY OF SITE

The historical sources reviewed are summarized below. The results of our review of these sources are summarized in Table 6.

- **Historical Aerial Photographs:** We reviewed aerial photographs dated between 1939 and 2012 obtained from EDR of Shelton, Connecticut; copies of aerial photographs reviewed are presented in Appendix B.
- **Historical Topographic Maps:** We reviewed USGS 15-minute and 7.5-minute historical topographic maps dated 1897, 1899, 1902, 1943, 1947, 1948, 1953, 1961, 1968, 1973, 1980, 1995 and 2012; copies of historical topographic maps reviewed are presented in Appendix B.
- **Historical Fire Insurance Maps:** EDR reported that the Site was not within the coverage area of fire insurance maps.
- **Local Street Directories:** We reviewed city directories obtained from EDR that were researched at approximately 5 year intervals between 1927 and 2014 to obtain information pertaining to past Site occupants. In general, the occupants listed in the

researched city directories appear consistent with previously described Site history; listed occupants include numerous commercial/retail businesses and restaurants. The city directory summary is presented in Appendix C.

Table 6. Summary of Historical Source Information for Site

Date	Source	Comment
1899 to 1968	Topographic maps	Small structures typical of residences or associate outbuildings are shown on the southeast portion of the Site. Orchards are depicted on-Site on the maps dated between 1948 and 1968.
1939, 1948, 1950, 1956, 1963 and 1968	Aerial photographs	The Site is shown to be occupied mainly by orchards. What appears to be a residence and several outbuildings are shown on the southeast portion of the Site.
1973	Topographic maps	The existing Sears retail and automotive center buildings, and the former associated gasoline station are depicted on-Site.
1974	Aerial photograph	The existing Sears retail and automotive center buildings, and the former associated gasoline station are depicted on-Site. The remainder of the Site is shown to be occupied by orchards and row crops.
1980 to 1995	Topographic maps	The Site appears similar to the existing conditions.
1981 to 2012	Aerial photograph	The Site appears generally similar to the existing conditions. The addition of parking structures is apparent during the late 1980s and mid-2000s, and the mall building along the west side of Wolfe Road was expanded during the mid-2000s.

6.2 HISTORICAL SUMMARY OF SITE VICINITY

Based on our review of the information described in Section 6.1, the general Site vicinity historically consisted mainly of agricultural land (orchards and row crops) with widely spaced residences. By the early 1960s, an increase in mainly residential development is apparent in the general vicinity, along with several commercial developments along major roadways, such as Stevens Creek Boulevard. By 1968, Interstate 280 was constructed adjacent to the north of the Site and Wolfe Road was constructed bisecting the Site. During subsequent decades, further increases in residential and commercial development in the vicinity are apparent.

SECTION 7: SITE RECONNAISSANCE

We performed a Site reconnaissance to evaluate current Site conditions and to attempt to identify Site Recognized Environmental Conditions. The results of the reconnaissance are discussed below. Additional Site observations are summarized in Table 7. Photographs of the Site are presented in Section 7.2.1.

7.1 METHODOLOGY AND LIMITING CONDITIONS

To observe current Site conditions (readily observable environmental conditions indicative of a significant release of hazardous materials), Cornerstone staff Stason I. Foster, P.E. visited the Site on February 13, 2018 and was accompanied by Mr. Juan Guerrero, Maintenance Director at Vallco Shopping Mall. Mr. Guerrero indicated that he has worked at the Site since 2005. We also discussed the Site with Mr. Mike Rohde, General Manager of Vallco Shopping Mall, who indicated that he has worked at the Site since 1998. The Site reconnaissance was conducted by walking representative areas of the Site, including selected interior and exterior areas. Due

to the size of the property, not all building areas were observed. Our reconnaissance focused on areas where hazardous materials reportedly were used or stored and our professional judgment. These areas were selected based on information contained in regulatory agency files and past reports reviewed during this study, and information supplied by Mr. Guerrero and Mr. Rohde during our Site visit. Cornerstone staff only observed those areas that were reasonably accessible, safe, and did not require movement of equipment, materials or other objects. Physical obstructions that limited our ability to view the ground surface at the Site included the existing structures and associated paved vehicle drives and parking areas (typical of developed properties).

7.2 OBSERVATIONS

At the time of our visit, the Site was developed with the Vallco Shopping Mall. Most tenant spaces within the enclosed, multi-level shopping mall were vacant, including anchor tenant buildings formerly occupied by Macy's, Sears and JC Penney. Remaining tenants were observed to include an AMC movie theater, a bowling alley (Bowlmor Lanes), an ice skating rink (Cupertino Ice Center), two restaurants (Dynasty and Benihana), and a fitness center (Bay Club). North Wolfe Road was observed to bisect the Site and an enclosed, pedestrian bridge connected the mall buildings on the east and west sides of North Wolfe Road. Several multi-level parking garages and at-grade parking lots bordered the mall structures. Two detached buildings formerly occupied by restaurants (TGI Fridays and Alexander's Steak House) were observed on the north side of the mall. A third detached structure formerly occupied by a Sears Automotive Center was observed on the southwest corner of the Site.

The two parcels on the northern portion of the Site adjacent to Interstate 280 were observed to be utilized for construction storage (APN 316-20-088) and for the in progress construction of a new hotel (APN 316-20-092). These two parcels were viewed only from the parcel boundaries.

Predominant areas of the Site at which hazardous materials were observed to be used/stored are summarized below:

Elevators: Based on our observations and information provided by Mr. Guerrero, 20 hydraulic powered elevators are present on-Site. These include passenger and freight elevators within the mall and anchor tenant structures and associated parking garages, along with a freight elevator within the Sears Auto Center. Secondary containment pans below two freight elevators within the Sears retail and auto center facilities were observed to be nearly full of hydraulic fluid, which appeared to be a result of leaks from pump equipment. Note that only a few randomly selected, representative elevator equipment rooms were accessed during or visit. Similar conditions could be present in others. Within the equipment rooms observed, no significant spills to the concrete floor slabs were observed, and impacts to underlying soil quality appeared unlikely to be significant.

Emergency Generators: Three diesel fueled emergency generators were observed on-Site. One was located on the roof of the Macy's building, one was on the second floor of the JC Penney building and the third was observed with the "Vallco generator room" on the ground floor of the mall west of Wolfe Road. Diesel ASTs were associated with each generator. No evidence of spills was readily apparent.

Mechanical Equipment: HVAC equipment and related mechanical equipment (chillers, cooling towers, pumps, natural gas fueled boilers and air compressors) were observed in on-Site mechanical rooms. Water treatment chemicals, such as corrosion and scale inhibitors and

biocides, were observed in polyethylene containers near the mechanical equipment. Petroleum based lubricants also were present (typically in 1-gallon and smaller containers). What appeared to be minor oil staining of the concrete surfaces below some of the equipment was observed. More significant staining on the floor and walls, and a spill (approximately 1 to 2 gallons) of what appeared to be oily water was observed on the concrete floor near refrigeration equipment at the Cupertino Ice Center.

Trash Compactors: Multiple hydraulic powered trash compactors are present at the Site that have hydraulic fluid ASTs (approximately 15 gallons each). Representative compactors were observed and no significant hydraulic fluid spills were readily apparent.

Pool Chemicals: At the Bay Club, pool water treatment chemicals consisting of sodium hypochlorite and muriatic acid (approximately 80 gallons in 1-gallon containers) were observed to be stored in secondary containment bins within a stairwell leading to the building's roof access. Although the stairwell is not a proper storage location, no spills were readily apparent. The pool water treatment and natural gas fueled heating equipment, along with approximately 50 pounds of chlorine tablets were observed on the rooftop.

Maintenance Storage Rooms: Various facility maintenance products, consisting mainly of paint related products and janitorial supplies were observed within maintenance rooms serving Vallco Shopping Center and the Bay Club. A metal flammable materials storage cabinet within the Vallco maintenance shop additionally contained several 5-gallon safety cans of gasoline, lubricants and other miscellaneous maintenance products. No significant spills were readily apparent.

Sears Automotive Center: The Sears Automotive Center building was observed to consist of approximately 24 vehicle service bays. Staining was observed on the concrete flooring of a former battery storage room. The previously described 1969 building plans, indicate that a floor drain within this room discharged to a below ground neutralization chamber, which was observed on the east exterior side of the building.

Some of the piping that appeared to formerly distributed grease, oil and transmission fluid from storage locations to the service bays had been removed; however, portions of the piping remained along interior building walls, ceilings and within the basement. Residual lubricants within the piping were observed to be dripping onto the concrete floor slab and walls at several locations, mainly within the basement. At the former location of two air compressors within the basement, the floor slab surrounding a floor drain also was heavily stained with oil.

Multiple former hydraulic lifts were observed within the service bays. The lift cylinders appeared to have been removed and the outer steel casings were filled with concrete. Some of the associated hydraulic fluid piping appeared to have been removed, while other portions of the piping remained. Most of the steel casings for the lifts extended into the basement and were anchored to the concrete floor slab of the basement. The basement, however, appeared to only be present below the southern approximately three fourths of the building. The lifts within the northern service bays likely extend into underlying soil, and associate below grade hydraulic fluid piping and reservoirs may remain.

A waste oil drain was observed in the floor along the interior western wall of the building. The drain lead into the basement and an associate (capped) pipe extended horizontally through the basement wall towards the location of the 1,000 gallon waste oil UST that was depicted on the 1969 building plan. A square access cover constructed of concrete was observed at the

building exterior, in the general vicinity of the depicted waste oil UST. The access cover could not be removed with the tools available at the time of our visit.

A below ground oil/water separator (as noted on the 1969 building plan) was observed on the east side of the building. A lift station sump also was observed with the southwest corner of the basement that presumably is connected to basement floor drains and other building facilities and presumably discharges to the sanitary sewer system.

JC Penney Automotive Center: Although the JC Penney Automotive Center reportedly discontinued operations in 1985, remnant features of the facility were observed including multiple, in-ground, hydraulic vehicle lifts. The lift cylinders appeared to have been removed and the outer steel casings were filled with pea gravel. Below grade ducting for an exhaust collection system also remained. Additionally, a bermed secondary containment area with a floor drain was observed. The drain appeared likely to have discharged to the oil/water separator that was closed in place in 1994. The access covers for the oil/water separator were observed nearby at the exterior of the building. An attempt was made to locate the ground water monitoring wells that were previously installed near the former JC Penney USTs; however, due to stored construction materials, the well locations were not readily apparent.

Other Site Features: Electricity and natural gas fuel sources appeared to be used for building heating/cooling purposes. Potable water appeared to be supplied by the local water service provider. The buildings are connected to the publicly owned sanitary sewer system. Several sanitary sewer pump stations are present on-Site; no on-Site septic systems were observed. Several grease interceptors (associated with current and former food service facilities) also are present on-Site; these would not be expected to have significantly impacted the Site. On-Site storm water catch basins and storm water collection sumps appeared to discharge via below ground piping to the City's storm water drainage system. Several PG&E owned electrical transformer were observed on concrete pads at the Site. No evidence of transformer oil leaks was readily apparent.

Table 7. Summary of Readily Observable Site Features

General Observation	Comments
Aboveground Storage Tanks	Observed as described above
Agricultural Wells	Not Observed
Air Emission Control Systems	Not Observed
Boilers	Observed as described above
Burning Areas	Not Observed
Chemical Mixing Areas	Not Observed
Chemical Storage Areas	Observed as described above
Clean Rooms	Not Observed
Drainage Ditches	Not Observed
Elevators	Observed as described above
Emergency Generators	Observed as described above
Equipment Maintenance Areas	Not Observed
Fill Placement	Not Observed
Ground Water Monitoring Wells	Not Observed
High Power Transmission Lines	Not Observed

Table 7 (Continued). Summary of Readily Observable Site Features

General Observation	Comments
Hoods and Ducting	Not Observed
Hydraulic Lifts	Observed as described above
Incinerator	Not Observed
Petroleum Pipelines	Not Observed
Petroleum Wells	Not Observed
Ponds or Streams	Not Observed
Railroad Lines	Not Observed
Row Crops or Orchards	Not Observed
Stockpiles of Soil or Debris	Not Observed
Sumps or Clarifiers	Observed as described above
Transformers	Observed as described above
Underground Storage Tanks	Possible waste oil UST at Sears Automotive Center
Vehicle Maintenance Areas	Observed as described above
Vehicle Wash Areas	Not Observed
Wastewater Neutralization Systems	Observed as described above

The comment "Not Observed" does not warrant that these features are not present on-Site; it only indicates that these features were not readily observed during the Site visit.

SECTION 8: ENVIRONMENTAL QUESTIONNAIRE AND INTERVIEWS

8.1 ENVIRONMENTAL QUESTIONNAIRE / OWNER INTERVIEW

To help obtain information on current and historical Site use and use/storage of hazardous materials on-Site, we provided environmental questionnaires to each of the three property owners. A completed questionnaire was obtained from Simeon/Wolfe Properties pertaining to parcel APN 316-20-088; a copy is attached in Appendix D. Based on our review of the completed questionnaire, Wolfe Properties LLC purchased the parcel in 2012. It reportedly was historically used as an overflow parking lot associated with Vallco Shopping Mall. Since 2015, Apple, Inc. reportedly has been using the parcel for construction storage purposes. No information indicative of Recognized Environmental Conditions was noted. A completed questionnaire was not received from KCR Development pertaining to APN 316-20-092. Based on other data reviewed by Cornerstone, the parcel owned by KCR historically was used for agricultural purposes and subsequently used as an overflow parking lot associated with Vallco Shopping Mall (similar to the Simeon/Wolfe Properties parcel).

Sand Hill Property Company did not complete the provided questionnaire; however, they referred Cornerstone to the previously completed reports listed in Table 3 and provided copies of each. They also provided access to the Site and contact information for Mr. Mike Rohde, General Manager of Vallco Shopping Mall, who was briefly interviewed during our Site visit.

8.2 INTERVIEWS WITH PREVIOUS OWNERS AND OCCUPANTS

Contact information for previous Site owners and occupants was not provided to us. Therefore, interviews with previous Site owners and occupants could not be performed.

SECTION 9: FINDINGS, OPINIONS AND CONCLUSIONS (WITH RECOMMENDATIONS)

Cornerstone performed this Phase I ESA in general accordance with ASTM E1527-13 to support David J. Powers & Associates in evaluation of Recognized Environmental Conditions. Our findings, opinions and conclusions are summarized below.

9.1 HISTORICAL SITE USAGE

Based on the information obtained during this study, the Site historically was used for agricultural purposes (orchards and row crops), and what appears to have been a residence with several associated outbuildings were present on the southeast portion of the Site. A Sears retail store and a separate automotive center building, with an associated gasoline station, were constructed on-Site in approximately 1970. The other currently existing Vallco mall structures were constructed between approximately 1974 and 1979, and include structures formerly occupied by other anchor tenants (Macys and JC Penney) and two detached on-Site buildings located north of the shopping mall that were occupied by restaurants (TGI Fridays and Alexander's Steakhouse). JC Penney operated an automotive repair facility on the eastern side of their building until approximately 1985.

9.2 CHEMICAL STORAGE AND USE

Prior hazardous materials use and storage at the Site was predominantly associated with the Sears Automotive Center and the JC Penney Automotive Center. These facilities stored a variety of automotive related hazardous materials USTs, ASTs, drums and smaller containers. Both facilities currently are vacant. Past photo-related mall tenants (e.g., Expressly Portraits, Fox Photo, Inc., Kits Camera, and The Picture People, Inc.) were engaged in photo developing activities that utilized photoprocessing chemicals and generated associated hazardous waste.

Hydraulic fluid is used on-Site within elevator equipment and trash compactors. Diesel fuel is stored in ASTs associated with three on-Site emergency generators. Pool water treatment chemical are used at the Bay Club fitness center. Other water treatment chemicals, such as corrosion and scale inhibitors and biocides, are used in the operation of HVAC equipment. Various facility maintenance products, consisting mainly of paint related products and janitorial supplies, also are used and stored on-Site.

At the Sears Automotive Center, remnant piping that appears to have formerly distributed grease, oil and transmission fluid from storage locations to the service bays remains along interior building walls, ceilings and within the basement. Residual lubricants within the piping were observed to be dripping onto the concrete floor slab and walls at several locations, mainly within the basement. Also, at the former location of two air compressors with the basement, the floor slab surrounding a floor drain also was heavily stained with oil. Staining also was observed on the floor of a former battery storage room. We recommend that the observed piping be properly removed and disposed, and that stains and residual oil be cleaned from the interior building surfaces. This work should be coordinated with the Santa Clara County Fire Department.

Near refrigeration equipment at the Cupertino Ice Center, oil staining and a spill (approximately 1 to 2 gallons) of what appeared to be oily water on the concrete floor slab also were observed. We recommend that the observed staining and spilled oil be cleaned.

The staining and spilled oil on concrete flooring at the Sears Automotive Center and the Cupertino Ice Center appeared unlikely to have significantly impacted underlying soil quality. However, when these facilities are demolished, we recommend that an Environmental Professional be present to observe underlying soil for evidence of potential impacts and, if observed, collect soil samples for laboratory analyses.

9.3 AGRICULTURAL USE

The Site was used for agricultural purposes for several decades. Pesticides may have been applied to crops in the normal course of farming operations. Residual pesticide concentrations may remain in on-Site soil. If elevated concentrations of agricultural chemicals are present, mitigation or soil management measures may be required during construction/earthwork activities. We recommend performing soil sampling to evaluate if agricultural chemicals are present. The sampling should focus of former orchard and row crop areas, as well as in the vicinity of outbuilding (barns and sheds) that were formerly located of the southeast portion of the Site; pesticides and/or pesticide application equipment commonly were stored in such outbuildings. Testing for lead contamination also shall be completed at the former structure locations. The sampling, which shall follow commonly accepted environmental protocols, shall be performed prior to soil excavation activities in order to appropriately profile the soil for off-haul to a disposal/accepting facility. The analytical data shall be compared to either residential

screening levels and/or the specific acceptance criteria of the accepting facility. If this soil is planned to be reused on-site, it shall be compared to residential screening levels and/or natural background levels of metals.

9.4 UNDERGROUND STORAGE TANKS

Two 350 gallon diesel USTs and one 500 gallon waste oil UST were previously located near the JC Penney Automotive Center and were removed in 1989. Two 12,000 gallon gasoline USTs, two 5,000 gallon gasoline USTs, and two 550 gallon oil USTs were removed from the Sears Automotive Center in 1985. As summarized in Section 4.1.3, soil and ground water quality studies and soil removal activities subsequently were conducted at these facilities. The SCVWD issued case closure letters to JC Penney and Sears in 1994 and 1999, respectively. Residual petroleum hydrocarbons remain in place near the former USTs; however, the reported residual contaminant concentrations generally do not exceed the Water Board's current Tier 1 ESLs or residential screening levels established by the DTSC and US EPA. Thus, the residual contaminants do not appear to pose a significant risk to current or future Site occupants.

A building plan from 1969 for the Sears Automotive Center that was reviewed by Cornerstone depicts a 1,000 gallon waste oil UST on the west side of the building. Similarly, the SWEEPS UST database lists seven USTs at Sears (the six USTs that were removed in 1985, and the 1,000 gallon waste oil UST). No records pertaining to the removal of a 1,000 gallon waste oil UST were identified during this study. During our Site visit, an access cover was observed in the pavement in the vicinity of the waste oil UST depicted on the 1969 building plan. Thus, it appears that a waste oil UST may remain on-Site. We recommend that the potential presence of a waste oil UST be further investigation by removing the access cover and, if uncertainty remains, the subsequent performance of a geophysical survey. If a UST is identified, it should be removed in coordination with the Santa Clara County Fire Department and DEH, and underlying soil quality should be evaluated. If no UST is identified, soil quality at the location of the waste oil UST, as depicted on the 1969 building plan, should be evaluated via the collection of soil samples from borings for laboratory analyses.

Fire Department records contained a contract dated June 12, 1986 between Sears, Roebuck and Company and K.E. Curtis Construction Company for the removal of a 500 gallon UST. No details regarding the contents or location of the UST were described in the contract, and no other records pertaining to a UST removal at Sears in 1986, or later, were identified during this study. It appears plausible that this contract was for the removal of the waste oil UST discussed above (if the UST is no longer present). Alternatively, a different undocumented UST may have been removed from the Site.

9.5 OIL-WATER SEPARATORS AND ACID NEUTRALIZATION CHAMBER

At the Sears Automotive Center, an oil-water separator (connected to floor drains within the building) and an acid neutralization chamber (connected to drains within a former battery storage room) were identified during this study. We recommend that these below ground features be cleaned and removed. This work should be coordinated with the Santa Clara County Fire Department and DEH. Soil quality below each of the structures should be evaluated via sampling and laboratory analyses.

In 1994, the 750 gallon oil-water separator at the JC Penny Automotive Center was steam cleaned and closed in place by filling it with cement grout under County Fire Department oversight. Based on reported soil sampling data, this separator does not appear to have

significantly impacted underlying soil quality. However, it likely will require removal and appropriate disposal during redevelopment activities.

9.6 HYDRAULIC LIFTS

Multiple former hydraulic lifts were observed with the service bays at the Sears and JC Penny Automotive Centers. The inner lift cylinders appeared to have been removed and the outer steel casings were filled with concrete (at Sears) and pea gravel (at JC Penney). We recommend that each of the below ground lift casings and any associated hydraulic fluid piping and reservoirs be removed and properly disposed. An Environmental Professional should be retained to observe the removal activities and, if evidence of leakage is identified, soil sampling and laboratory analyses should be conducted.

9.7 LEAD-BASED PAINT AND TERMITE CONTROL PESTICIDES

The Consumer Product Safety Commission banned the use of lead as an additive in paint in 1978. Based on the age of the building(s), lead-based paint may be present. The removal of lead-based paint is not required prior to building demolition if the paint is bonded to the building materials. However, if the lead-based paint is flaking, peeling, or blistering, it should be removed prior to demolition. In either case, applicable OSHA regulations must be followed; these include requirements for worker training, air monitoring and dust control, among others. Any debris containing lead must be disposed appropriately.

Additionally, soil adjacent to structures that are painted with lead-containing paint can become impacted with lead as a result of the weathering and/or peeling of painted surfaces. Soil near wood framed structures also can be impacted by pesticides historically used to control termites. Lead and/or pesticides often are identified in soil near old residences and associated outbuildings, such as those historically located on the southeast portion of the Site. Prior to redevelopment of the Site, we recommend that shallow soil at the former structure locations be evaluated for the possible presence of lead and pesticides.

9.8 IMPORTED SOIL

If the planned development will require importing soil for Site grading, we recommend documenting the source and quality of imported soil. The DTSC's Clean Fill Advisory (2001) provides useful guidance on evaluating imported fill.

9.9 POTENTIAL ENVIRONMENTAL CONCERNS WITHIN THE SITE VICINITY

Based on the information obtained during this study, no hazardous material spill incidents have been reported in the Site vicinity that would be likely to significantly impact the Site. However, as is typical to many commercial areas, several facilities in the vicinity were reported as hazardous materials users. If leaks or spills occur at these facilities, contamination could impact the Site, depending upon the location of the property, the magnitude of the release, and the effectiveness of cleanup efforts.

9.10 GROUND WATER MONITORY WELLS

In 1990, four ground water monitoring wells were installed on-Site to evaluate potential impacted from the former USTs at JC Penney. No records pertaining to the current status of these wells were identified during this study. Due to stored construction materials, the reported

well locations were not accessible at the time of our visit; one location appears to be below the parking garage constructed to the south of the JC Penney building. Prior to redevelopment of the Site, these wells should be properly destroyed in accordance with SCVWD Ordinance 90-1.

9.11 FACILITY CLOSURE

As part of the facility closure process for occupants that use and/or store hazardous materials, the Santa Clara County Fire Department and DEH typically require that a closure plan be submitted by the occupant that describes required closure activities, such as removal of remaining hazardous materials, cleaning of hazardous material handling equipment, decontamination of building surfaces, and waste disposal practices, among others. We recommend that facility closure be coordinated with the Fire Department and DEH to ensure that required closure activities are completed prior to redevelopment of the Site.

9.12 SITE MANAGEMENT PLAN

We recommend preparing a Site Management Plan (SMP) and Health and Safety Plan (HSP) for the proposed demolition and redevelopment activities. The purpose of these documents will be to establish appropriate management practices for handling impacted soil, soil vapor and ground water or other materials that may potentially be encountered during construction activities, especially in areas of former hazardous materials storage and use, and the profiling of soil planned for off-Site disposal. The Site Management Plan should document former and suspect UST locations, hazardous materials transfer lines, oil-water separators, neutralization chambers, and hydraulic lifts, etc. The SMP also would provide the protocols for accepting imported fill materials.

9.13 ASBESTOS CONTAINING BUILDING MATERIALS (ACBMS)

Due to the age of the on-Site structure(s), building materials may contain asbestos. Because demolition is planned, an asbestos survey is required by local authorities and/or National Emissions Standards for Hazardous Air Pollutants (NESHAP) guidelines. NESHAP guidelines require the removal of potentially friable ACBMs prior to building demolition or renovation that may disturb the ACBM.

9.14 DATA GAPS

ASTM Standard Designation E 1527-13 requires the Environmental Professional to comment on significant data gaps that affect our ability to identify Recognized Environmental Conditions. A data gap is a lack of or inability to obtain information required by ASTM Standard Designation E 1527-13 despite good faith efforts by the Environmental Professional to gather such information. A data gap by itself is not inherently significant; it only becomes significant if it raises reasonable concerns. No significant data gaps were identified during this Phase I ESA.

9.15 DATA FAILURES

As described by ASTM Standard Designation E 1527-13, a data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the historical research objectives have not been met. Data failures are not uncommon when attempting to identify the use of a Site at five year intervals back to the first use or to 1940 (whichever is earlier). ASTM Standard Designation E 1527-13 requires the Environmental Professional to comment on the significance of data failures and whether the

data failure affects our ability to identify Recognized Environmental Conditions. A data failure by itself is not inherently significant; it only becomes significant if it raises reasonable concerns. No significant data failures were identified during this Phase I ESA.

9.16 RECOGNIZED ENVIRONMENTAL CONDITIONS

Cornerstone has performed a Phase I ESA in general conformance with the scope and limitations of ASTM E 1527-13. This assessment identified the following Recognized Environmental Conditions⁴.

- Documents reviewed during this study, as well as observations at the Site, indicate that a 1,000 gallon waste oil UST may be present on the west side of the Sears Automotive Center building. No documents pertaining to the removal of this UST or the evaluation of soil quality at the UST location were identified. There is a potential that this UST, if present, may have impacted soil, soil vapor and/or ground water at the Site.
- An oil-water separator (connected to floor drains within the building) and an acid neutralization chamber (connected to drains within a former battery storage room) were identified during this study on the east side of the Sears Automotive Center building. There is a potential that these features may have impacted soil, soil vapor and/or ground water at the Site.
- Vehicle lift components (*e.g.*, outer lift cylinder casings and possibly associated hydraulic fluid piping and reservoirs) remain in ground at the JC Penney Automotive Center and within the northern portion of the Sears Automotive Center that is not underlain by the basement. There is a potential that these features may have impacted soil and/or ground water at the Site.
- In 1986, Sears, Roebuck and Company established a contract with K.E. Curtis Construction Company for the removal of a 500 gallon UST. No details regarding the contents or location of the UST were described in the contract, and no other records pertaining to a UST removal at Sears in 1986, or later, were identified. There is a potential that this unidentified UST may have impacted soil, soil vapor and/or ground water at the Site.
- The Site historically was used for agricultural purposes. There is a potential that residual pesticides could remain in Site soil. If present, this soil may require appropriate management.
- Soil adjacent to structures that are painted with lead-containing paint can become impacted with lead as a result of the weathering and/or peeling of painted surfaces. Soil near wood framed structures also can be impacted by pesticides historically used to control termites. There is a potential that residual lead and pesticide concentrations could remain in on-Site soil resulting from the prior residence and outbuildings previously located on the southeast portion of the Site.

⁴ The presence or likely presence of hazardous substances or petroleum products on the Site: 1) due to any release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment.

This assessment identified the following Historical Recognized Environmental Conditions⁵:

- Two 350 gallon diesel USTs and one 500 gallon waste oil UST were previously located near the JC Penney Automotive Center and were removed in 1989. Two 12,000 gallon gasoline USTs, two 5,000 gallon gasoline USTs, and two 550 gallon oil USTs were removed from the Sears Automotive Center in 1985. The SCVWD issued case closure letters to JC Penney and Sears in 1994 and 1999, respectively, indicating that no further work was required.

Within the Sears Automotive Center building, remnant piping is present that appears to have formerly distributed grease, oil and transmission fluid from storage locations to the service bays and hydraulic fluid to vehicle lifts. Residual spilled oil and staining is present on the concrete floor slabs and walls of the building, mainly within the basement. Near refrigeration equipment at the Cupertino Ice Center, oil staining and a spill (approximately 1 to 2 gallons) of what appeared to be oily water on the concrete floor slab also were observed. The staining and spilled oil on concrete floors and walls at the Sears Automotive Center and the Cupertino Ice Center appeared unlikely to have significantly impacted underlying soil quality; thus, we do not categorize these observations as Recognized Environmental Conditions. As noted in ASTM E 1527-13, the term Recognized Environmental Condition is not intended to include de minimis conditions that generally do not present a significant threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. We recommend, however, that the observed staining and spilled oil be cleaned, and that the remnant piping be properly removed and disposed. Additionally, when these facilities are demolished, we recommend that an Environmental Professional be present to observe underlying soil for evidence of potential impacts and, if observed, collect soil samples for laboratory analyses.

SECTION 10: LIMITATIONS

Cornerstone performed this Phase I ESA to support David J. Powers & Associates in evaluation of Recognized Environmental Conditions associated with the Site. David J. Powers & Associates understands that no Phase I ESA can wholly eliminate uncertainty regarding the potential for Recognized Environmental Conditions to be present at the Site. This Phase I ESA is intended to reduce, but not eliminate, uncertainty regarding the potential for Recognized Environmental Conditions. David J. Powers & Associates understands that the extent of information obtained is based on the reasonable limits of time and budgetary constraints.

Findings, opinions, conclusions and recommendations presented in this report are based on readily available information, conditions readily observed at the time of the Site visit, and/or information readily identified by the interviews and/or the records review process. Phase I ESAs are inherently limited because findings are developed based on information obtained from a non-intrusive Site evaluation. Cornerstone does not accept liability for deficiencies, errors, or misstatements that have resulted from inaccuracies in the publicly available information or from interviews of persons knowledgeable of Site use. In addition, publicly available information and field observations often cannot affirm the presence of Recognized Environmental Conditions; there is a possibility that such conditions exist. If a greater degree of confidence is desired, soil, ground water, soil vapor and/or air samples should be collected by Cornerstone and analyzed

⁵ A past Recognized Environmental Condition that has been addressed to the satisfaction of the applicable regulatory agency or meeting unrestricted use criteria established by the applicable regulatory agency without subjecting the Site to required controls or restrictions.

by a state-certified laboratory to establish a more reliable assessment of environmental conditions.

Cornerstone acquired an environmental database of selected publicly available information for the general area of the Site. Cornerstone cannot verify the accuracy or completeness of the database report, nor is Cornerstone obligated to identify mistakes or insufficiencies in the information provided (ASTM E 1527-13, Section 8.1.3). Due to inadequate address information, the environmental database may have mapped several facilities inaccurately or could not map the facilities. Releases from these facilities, if nearby, could impact the Site.

David J. Powers & Associates may have provided Cornerstone environmental documents prepared by others. David J. Powers & Associates understands that Cornerstone reviewed and relied on the information presented in these reports and cannot be responsible for their accuracy.

This report, an instrument of professional service, was prepared for the sole use of David J. Powers & Associates and may not be reproduced or distributed without written authorization from Cornerstone. It is valid for 180 days. An electronic transmission of this report may also have been issued. While Cornerstone has taken precautions to produce a complete and secure electronic transmission, please check the electronic transmission against the hard copy version for conformity.

Cornerstone makes no warranty, expressed or implied, except that our services have been performed in accordance with the environmental principles generally accepted at this time and location.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<i>INTERSIL INC</i>	<i>10900 N TANTAU AVENU</i>	<i>NE 1/4 - 1/2 (0.449 mi.)</i>	<i>0</i>	<i>52</i>

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/11/2017 has revealed that there are 3 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 8 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/30/2017 has revealed that there are 9 ENVIROSTOR sites within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 07/23/2017 has revealed that there is 1 FINDS site within approximately 0.001 miles of the target property.

EXECUTIVE SUMMARY

CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CUPA Listings list, as provided by EDR, has revealed that there are 11 CUPA Listings sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Description:	Due to a traffic accident involving a PG&E vehicle transporting transformer, transformer fell onto a private roadway at shopping mall. Oil fell onto roadway and storm drain, drain was 100-150 feet from original spill site. Storm drain was barricaded off, checked the next storm drain and nothing was found. All contained within previous storm drain. Two injuries as a result of traffic accident

Description:	<p>Caller states substance released due to a fire. Caller states a sprinkler fused which resulted in the tank filling and overflowing. Caller states substance released to grease traps and possibly into a sanitary sewer. Caller states a contractor is enroute for clean-up. Caller states this occurred at the Vallco Shopping Mall and approximately 20 people were evacuated from the mall and theater. Caller also states no waterways were impacted. Caller states the fire is out with minor flame damage and moderate water damage.</p>

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Summary Details:

Conditions at proposal June 24, 1988): Intersil, Inc., and Siemens Components have manufactured semiconductors for several years on two locations near one another covering 15 acres in Cupertino, Santa Clara County, California. The facilities are surrounded by residential, industrial, and business areas. Investigations conducted in 1982 as part of the California Regional Water Quality Control Board s underground tank leak detection program found organic solvents, including trichloroethylene, 1,1,1-trichloroethane, tetrachloroethylene, trichlorofluoroethane, and 1,1-dichloroethylene, in soils on the site and in ground water on and off the site. Contamination is believed to have resulted from local ed spills and from leaking underground storage tanks, piping, and other equipment involving the two companies. More than 300,000 people obtain drinking water from public wells within 3 miles of the site. Siemens and Intersil began remedial investigations at the site in 1982 and 1983, respectively, under State supervision. The underground storage tanks were removed, and in 1983 a system was installed to extract gases from soil; the system was expanded in 1985. In June 1986, the California Regional Water Quality Control Board issued Waste Discharge Requirements under the California Water Code requiring both companies to determine the extent of contamination in ground water and soils. In July 1986, a system was installed to pump contaminated ground water in the uppermost aquifer to the surface and treat it. Since April 1988, a pump and treat system for the two uppermost aquifers has been in full-scale operation. Intersil stopped operations in 1988, and all remaining underground

equipment was removed. Status August 30, 1990): In February 1990, the two companies released draft reports of remedial investigations/feasibility studies for the site and off-site downgradient areas. Interim off-site remedial activities are scheduled to begin in June 1990. Also in June 1990, the State plans to issue tentative site cleanup requirements and hear public comments on the proposed remedial action plan.

Background Info: A manufacturer of microwave electronic equipment has been in operation at the site since 1963. Manufacturing processes include the use of acids and solvents. Contamination at the site appears to be primarily associated with a neutralization sump and a chemical storage shed. The facility is located within the Hillview-Porter region. Detected soil contaminants include trichloroethene (TCE), dichloroethene (DCE), trichloroethane (TCA), and chlorobenzenes. Groundwater contaminants include TCE at 910 parts per billion (ppb), 1,1-DCE at 92 ppb, chloroform at 100 ppb, and Freon at 63 ppb. There are seven private wells and a creek downgradient of the site. There are two backup municipal supply wells within 1.5 miles of the site. Inhabitants of the residential area downgradient from the site are potential receptors for groundwater and surface water contamination.

Environmental Interest/Information System

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Primary Waste Type: Hazardous/Influent or Solid Wastes that contain toxic, corrosive, ignitable or reactive substances and must be managed according to applicable DOHS standards.

Secondary Waste: Not reported

Secondary Waste Type: Not reported

Design Flow: 0

Baseline Flow: 0

Reclamation: No reclamation requirements associated with this facility.

POTW: The POTW Does not have an approved pretreatment program. Some POTWs may have local pretreatment programs that have not been approved by the regional board and/or EPA.

Treat To Water: Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.

Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

 Status Date: 09/23/2014
 Case Worker: Not reported
 RB Case Number: 14-064
 Local Agency: Not reported
 File Location: All Files are on GeoTracker or in the Local Agency Database
 Local Case Number: 07S1W18L01f
 Potential Media Affect: Aquifer used for drinking water supply
 Potential Contaminants of Concern: MTBE / TBA / Other Fuel Oxygenates, Gasoline
 Site History:

A previous Fuel Leak Investigation Case (07S1W18L01f) was open at this site. In 1985 a loss of 1,800 gallons of product was identified through inventory reconciliation. The underground storage tanks (USTs) were removed in 1985 and soil investigations were completed in the UST area to 120 feet below the ground surface (ft bgs). Very low levels of contamination were detected and groundwater was not encountered. The case was closed on March 15, 1996. This case closure is included as Attachment 5. 2000 In September, product piping was replaced. 4 soil samples were collected beneath the dispensers and 6 soil samples were collected along the product lines at depths of 1-1.5 feet below the ground surface (ft bgs). The samples were reported to have low to non-detectable concentrations of Total Petroleum Hydrocarbons as Gasoline (TPHg), Toluene, Ethylbenzene, Xylenes and Methyl tert-Butyl Ether (MtBE). Benzene was not reported to be present in any of the samples above the laboratory reporting limit. 2001 In April, 2 soil borings (SB1 and SB2) were advanced to 75 ft bgs onsite. Groundwater was encountered and boring SB2 was completed as well MW1. Approximately]%-inch of free product (FP) was measured in SB1; which was not completed as a well due to its high traffic location and lack of well supplies. 14 soil samples were collected and were reported to have maximum concentrations of 8,940 parts per million (ppm) TPHg, 99.3 ppm Benzene, 459 ppm Toluene, 157 ppm Ethylbenzene, 816 ppm Xylenes and 0.468 ppm MtBE. A grab groundwater sample was collected from boring SB1 and was reported to contain 248,000 parts per billion (ppb) TPHg, 14,700 ppb Benzene, 22,700 ppb Toluene, 4,860 ppb Ethylbenzene, and 25,600 ppb Xylenes. Additionally, a sample of the product (SB1-W PRODUCT) was analyzed and reported to contain 273,000 ppb TPHg, 16,700 ppb Benzene, 27,700 ppb Toluene, 5,210 ppb Ethylbenzene, 27,000 ppb Xylenes, 1,400,000 ppb Jet Fuel A, and 1,470,000 ppb TPH as Diesel (TPHd). It was reported that the presence of TPHjf and TPHd in the sample was indicative of an older fuel leak. 2002 In April, 6 wells (MW2 through MW7) were installed to 90 ft bgs. 48 soil samples were collected and reported to have maximum concentrations of 33,000 ppm TPHg, 12 ppm Benzene, 220 ppm Toluene, 170 ppm Ethylbenzene, 920 ppm Xylenes, 12 ppm MtBE, and 2.5 ppm Tert Butyl Alcohol (TBA). Following well completion, approximately 0.01 ft FP was measured in well MW5. Also

MAP FINDINGS

MOBIL (Continued)

S103992302

at this time, a dual phase extraction (DPE) test was conducted at the site. Approximately 2,300 gallons of groundwater were extracted and disposed of offsite. It is estimated that 746.08 pounds of TPHg, 21.62 pounds of Benzene, and 31.37 pounds of MtBE were removed in the vapor phase. Based on the results of the test, DPE was found to be a good remedial method. 2003 In July and August, 4 wells (MW8 through MW11) were installed offsite to depths of 90-100 ft bgs. 44 soil samples were collected and were not reported to have concentrations of the Constituents of Concern (COCs) above the laboratory reporting limits, except for one detection of 0.015 ppm Xylenes in well MW10 at 8.5 ft bgs. In November, FP was reported to be present again in wells MW2 and MW5. Bailing commenced and continued through March 2005 to remove the FP from these wells. It is estimated that 0.66 gallons of FP was removed by this method. 2004 In July, 6 ozone sparge wells (OS6 through OS11) and 5 ozone sparge/soil vapor extraction wells (OS1/SVE1 through OS/SVE5) were installed onsite between 70 and 108 ft bgs. 15 soil samples were collected and reported to have maximum concentrations of 8,700 ppm TPHg, 90 ppm Benzene, 510 ppm Toluene, 140 ppm Ethylbenzene, 820 ppm Xylenes and 2.1 ppm MtBE. 2005 In June, the soil vapor extraction (SVE) and ozone injection systems were started at the site. 2006 In April, 2 monitoring wells (MW12 and MW13) were completed to 94 ft bgs offsite. 18 soil samples were collected and reported to have very low to non-detectable concentrations of COCs. 2008 In September, the SVE and ozone injection systems were shut down and rebound monitoring began. 2009 In July and August, 6 soil borings (B5 through B10) were advanced to depths of 80-105 ft bgs, except for boring B10, which was only advanced to 30 ft bgs. Groundwater was not encountered in borings B7, B9 and B10. Borings B9 and B10 were advanced for the collection of confirmation soil samples and groundwater was not anticipated to be encountered in these borings. Boring B7 was advanced to 100 ft bgs and left open for an hour and groundwater did not enter the boring. Borings B5, B6 and B8 were advanced an additional 4 feet past 100 ft bgs and groundwater was encountered. 2011 In October, the ozone sparge system was re-started onsite and ran through April 2012. 2012 In May, verification groundwater monitoring commenced. 2013 In February, the final groundwater monitoring event was conducted and reported maximum concentrations of 680 ppb TPHg, 36 ppb Benzene, 5.2 ppb Toluene, 10 ppb Ethylbenzene, 52 ppb Xylenes, 12 ppb MtBE, 27 ppb TBA, and 0.84 ppb 1,2-DCA. In September, 5 soil borings (B11 through B15) were advanced onsite to depths of 7-9 ft bgs. 11 shallow soil samples were collected and were not reported to have concentrations of constituents tested for present above the laboratory reporting limits.

FINDS:

Registry ID: 110002624321

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: * Discovery
Completed Date: 04/23/1987
Comments: Completed Site Screening. PA recommended due to incomplete file information; inadequate information to assess public health risks.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 09/27/1991
Comments: Completed PEA review. Further action is required. Information provided in the PEA report is inadequate. Review of PEA and other documents show several carcinogens are present in soil & groundwater of site. Although levels of contaminants in the soil and groundwater were substantially reduced after remediation, still need to determine the public health risk based on remaining contaminants at the site. It is further determined that the Small Site Removal Fee is necessary in order to address the administrative oversight of completion of the above response action. Should additional information suggest otherwise, the small site removal fee may change. Therefore, the Department recommends prompt action.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Assessment Report
Completed Date: 11/13/1987
Comments: Completed PA. RWQCB is involved in mitigation of contamination. Contaminated soil is being excavated and aerated.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

electronic components. Soil vapor samples collected in 2007 as part of a Phase I and subsurface investigation indicated trichloroethylene (TCE), tetrachloroethylene, and Freon 113 were present in sub-slab soil vapor. TCE concentrations in sub-slab soil vapor were above the Regional Water Quality Control Board (RWQCB) Environmental Screening Level. The site is currently under redevelopment as part of the Apple Campus 2 Project. An Environmental Site Management Plan (ESMP) was prepared in March 2012 for the site and approved by RWQCB on July 20, 2012. The ESMP identifies vapor intrusion as a potentially complete exposure pathway at the site. The ESMP outlines mitigation measures for the buildings overlaying areas of concern within the Apple Campus 2 Project area, including the site, RWQCB is still involved in regulatory activities at the site and a status recommendation of Refer to RWQCB was made in the site screening document.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Public Notice
Completed Date: 12/26/2013
Comments: The public notice announces the public comment period for the Draft Response Plan, which runs from January 6, 2014 through February 5, 2014. The Draft Response Plan proposes the continued operation of the pilot test soil vapor extraction system as the final response action for the Site. The public notice is scheduled to run in the Cupertino Courier on January 3, 2014.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 03/03/2014
Comments: The report documents the implementation of the Soil Vapor Extraction (SVE) System Pilot Test Work Plan, and describes the SVE system design and installation, describes the startup monitoring results, describes the pilot testing procedures, and presents the results and conclusions of the pilot testing program. DTSC agreed in its approval letter that soil vapor extraction is a feasible technology for the Site and directed that it be the remedy proposed in a Draft Response Plan.

CUPERTINO VILLAGE CLEANERS (Continued)

S108054446

Comments: The Report summarizes the interim results of rebound testing being implemented to determine if the operation of the soil vapor extraction (SVE) system from November 2011 to March 2014 effectively remediated the subsurface volatile organic compound (VOC) contamination. The rebound test sampling results showed a generally increasing concentration trend for tetrachloroethylene across the Site, but soil gas concentrations continued to be below the site-specific commercial cleanup goals. The increasing VOC concentrations indicated that equilibrium has not been reached and rebound testing is to continue. The SVE system may need to be restarted if an increasing concentration trend is observed during the next sampling event.

Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Implementation Workplan
Completed Date: 04/26/2016
Comments: Cupertino Village LP plans to restart the soil vapor extraction (SVE) system due to high concentrations of tetrachloroethylene in soil gas after rebound testing. The Work Plan describes the procedures to reconnect and restart the SVE system; the operation, maintenance, and monitoring of the SVE system; and the rebound testing and reporting of results. The SVE system will operate for three months and system monitor will occur monthly. Following 3 months of SVE system operation, the system will be shut down for rebound testing with soil gas sampling at 1, 2, and 3 month intervals.

Completed Date: 07/09/2009
Comments: Work Notice completed and will be mailed out on July 15, 2009.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: AB 389 Response Plan
Completed Date: 02/24/2014
Comments: The response action selected in the Response Plan is continued operation of the existing soil vapor extraction system that is on the Site. The system was installed as part of a pilot test. The Response Plan established both residential and commercial cleanup goals for tetrachloroethylene in subsurface and sub-slab soil vapor. PCE in soil vapor will be reduced to the extent practicable. A Land Use Covenant will be put in place to restrict any portion of the Site where the residential or unrestricted use cleanup goals are not achieved.

S108054446

pilot test soil vapor extraction system as the final response action for the Site. The public notice is scheduled to run in the Cupertino Courier on January 3, 2014.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 03/03/2014
Comments: The report documents the implementation of the Soil Vapor Extraction (SVE) System Pilot Test Work Plan, and describes the SVE system design and installation, describes the startup monitoring results, describes the pilot testing procedures, and presents the results and conclusions of the pilot testing program. DTSC agreed in its approval letter that soil vapor extraction is a feasible technology for the Site and directed that it be the remedy proposed in a Draft Response Plan.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 09/22/2014
Comments: The Report summarizes the interim results of rebound testing being implemented to determine if the operation of the soil vapor extraction (SVE) system from November 2011 to March 2014 effectively remediated the subsurface volatile organic compound (VOC) contamination. The rebound test sampling results showed a generally increasing concentration trend for tetrachloroethylene across the Site, but soil gas concentrations continued to be below the site-specific commercial cleanup goals. The increasing VOC concentrations indicated that equilibrium has not been reached and rebound testing is to continue. The SVE system may need to be restarted if an increasing concentration trend is observed during the next sampling event.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 09/03/2015
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Implementation Workplan
Completed Date: 04/26/2016
Comments: Cupertino Village LP plans to restart the soil vapor extraction (SVE) system due to high concentrations of tetrachloroethylene in soil gas after rebound testing. The Work Plan describes the procedures to reconnect and restart the SVE system; the operation, maintenance, and monitoring of the SVE system; and the rebound testing and reporting of results. The SVE system will operate for three months and system monitor will occur monthly. Following 3 months of SVE system operation, the system will be shut down for rebound testing with soil gas sampling at 1, 2, and 3 month intervals.

The Intersil/Siemens site is being proposed for the NPL. The RWQCB will continue to have lead responsibility for monitoring the RPs' remedial activities. Until such time as the RWQCB refers the site to DHS for follow-up using Bond funds, no money will be budgeted from the fund for this site.

INTERSIL/SIEMENS (Continued)

S105960443

Site Description: A manufacturer of microwave electronic equipment has been in operation at the site since 1963. Manufacturing processes included use of acids and solvents. Contamination at the site appears to be primarily associated with a neutralization sump and a chemical storage shed. The facility is located within the Hillview Porter Region.

Hazardous Waste Desc: Soil contaminants detected to date include trichloroethene (TCE), dichloroethene (DCE), trichloroethane (TCA) and chlorobenzenes. Ground water contaminants include TCE at 910 parts per billion (ppb), 1,1,-DCE at 92 ppb, chloroform at 100 ppb and Freon at 63 ppb.

Threat To Public Health & Env: There are seven private wells and a creek downgradient of the site. The maximum level of TCE detected in the creek to date is 18 ppb. There are two backup municipal supply wells within 1 1/2 miles of the site. Inhabitants of the residential area downgradient from the site are potential receptors for ground water and surface water contamination.

Site Activity Status: Releases of chemicals occurred at both Companies' underground waste handling facilities. The data available indicate that the contaminants in the ground water may be moving offsite. Current activities required of Intersil and Siemens were outlined by the RWQCB Waste Discharge Requirements dated June, 1986. They include: 1) installation of onsite interim remediation of VOCs in the soil and Aquifer A; 2) participation in further characterization and remediation of the combined chemical plumes; and 3) evaluation of possible conduits connecting the shallow and deep aquifers. Due to disagreement over the source of contamination in the B Aquifers, Intersil is not cooperating in investigations nor remediation of that contamination. However, the RWQCB has determined that contamination from both sites has migrated to the B and C aquifers.

Longitude: -122.004595
Case Type: Cleanup Program Site
Case Worker: RWP
Local Agency: SANTA CLARA VALLEY WATER DISTRICT
RB Case Number: 43S0110
File Location: Regional Board
Potential Media Affected: Aquifer used for drinking water supply, Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern: 1,1,1-Trichloroethane (TCA), Trichloroethylene (TCE)
Site History: The Siemens property is a two property Superfund site property along with the adjacent upgradient former Intersil /DTKM. Similar to the Teledyne-Spectraphysics North Bayshore Area, there is also the "Intersil/Siemens" off-property area to the north of the Siemens property. Siemens collects groundwater from the off-property area and pumps it through the on-property groundwater extraction and treatment (GWET) system. Underground storage tank removal, soil excavation and soil vapor extraction have substantially decreased groundwater-CVOC levels at the former Siemens property. Siemens curtailed their vapor extraction system in 2004 after removing approximately 19,000 pounds of volatile organic compounds from the vadose zone alone.. Since that time they voluntarily performed a pilot study testing the feasibility of enhanced reductive dechlorination on the north side of the property and proceeded without Water Board oversight to expand ERD pilot study that was interrupted several years ago by lowered

MAP FINDINGS

SIEMENS COMPONENTS, INC., OPTO ELECTRONICS (Continued)

S104573904

groundwater levels. Results of the pilot study have not been submitted to the Regional Water Board. Groundwater extraction and treatment along north and south margins of the site has hydraulically contained groundwater contaminants for over 20 years. The water-bearing zones of concern were recently re-designated A2, A3, and A4 Zones within the A aquifer. During the 1990s, above-average rainfall raised groundwater levels by 50 feet to create a resaturated zone, currently designated as the A2 And A3 Zones. Based on results of soil cleanup confirmation sampling in the south portion of the property, Siemens encountered groundwater-TCE up to 3,000 parts per billion (ppb) in the A2 Zone. After reporting these results to the Regional Water Board, we required the Responsible Party for former Intersil (GE) to re-characterize their side of the A2 Zone where they detected groundwater-TCE levels up to 9,000 ppb. On-property vapor intrusion concerns arose within the last five years, when on-property Kaiser employees were mis-informed by Kaiser management that they were not working on a Superfund site property, Indoor air sampling was then conducted in the building and based on indoor air CVOC levels similar to ambient air levels, the vapor intrusion evaluation concluded that vapor intrusion is not occurring. However, the employees no longer trusted anything management after misinforming them about the contaminated nature of the property. When Kaiser engaged the Regional Water Board, we issued a fact sheet summarizing Indoor air sampling results in the context of toxicological principles, the Kaiser employees were reportedly satisfied. Off-property vapor intrusion evaluation has been completed across the on- and off-property areas and indicated that no vapor intrusion is occurring above levels of concern.

Global Id: SL20290907
Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)
Lead Agency Case Number: Not reported
Latitude: 37.3372375317259
Longitude: -122.001714706421
Case Type: Cleanup Program Site
Case Worker: RWP
Local Agency: SANTA CLARA VALLEY WATER DISTRICT
RB Case Number: 43S0003
File Location: Regional Board
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: 1,1,1-Trichloroethane (TCA), ** 1,2-DICHLOROBENZENE, ** 1,4-DICHLOROBENZENE, Other Solvent or Non-Petroleum Hydrocarbon, Freon, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Xylene

Site History: This site is adjacent to and cross gradient from the Siemens property of the Intersil-Siemens Superfund site. AMI conducted groundwater extraction until achieving asymptotic removal rates. Then AMI implemented an on-property in-situ chemical oxidation to further reduce chlorinated volatile organic compound (CVOC) levels in groundwater. Subsequent monitoring appears to indicate that on- and off-property groundwater-CVOC levels have continued to decrease and the site is currently under an informal monitored natural attenuation program. Although the groundwater-CVOC levels are below our May 2008 environmental screening levels (ESLs) for potential indoor air (IA) vapor intrusion (VI), the ESLs presume what may be an excessively high attenuation factor of 1,000; and our draft revised ESLs are still out for public comment. Although there has been no IA VI evaluation at the site to definitely indicate that IA VI is not occurring, we are currently in the process of directing the Responsible Parties for the adjacent Intersil-Siemens Superfund site to IA test the former AMi Building 700/800 that is west of and adjacent to the buildings over the former AMI source area. Pending results of IA testing at Building 700/800, we may require a VI evaluation of buildings over the former source area.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 01/09/1992
Comments: The finding of significant levels of contamination at depth raises the possibility of groundwater contamination. Site was a former photo mask facility. The report submitted to the Santa Clara Deputy Fire Marshall was intended to begin characterizing the contamination beneath former underground waste pipes associated with the acids and solvents used at this former manufacturing facility. The chemicals found at significant concentrations in soil were 1,2 dichlorobenzene (ca. 100 ppm), ethyl benzene (2400 ppm), xylenes (16,000 ppm), trichloroethylene (900 ppm), toluene (16 ppm), and perchloroethylene (8.6 ppm). Some of these contaminants were found at depths of up to 41

feet below ground surface. During drilling, strong solvent odors were observed and air sampling was undertaken revealing high concentrations of trichloroethylene, toluene, tetrachloroethylene, ethylbenzene, and zylenes. Lower concentrations of 1,2,4-trimethylbenzene and dichlorobenzene were detected.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 09/13/2017	Source: Environmental Protection Agency

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Data Release Frequency: Varies

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

East Map:	5640416 SAN JOSE WEST, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06085C0209H	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
06085C0208H	FEMA FIRM Flood data
06085C0228H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
CUPERTINO	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/4 - 1/2 Mile North
Site Name:	Hewlett Packard Cico Div
Site EPA ID Number:	CAD049227390
Groundwater Flow Direction:	NOT AVAILABLE.
Inferred Depth to Water:	approximately 50 feet.
Hydraulic Connection:	A hydraulic connection exists between the surficial and lower aquifers.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Quaternary
Code: Q (*decoded above as Era, System & Series*)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: BOTELLA

Soil Surface Texture: clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 0.60 Min: 0.20	Max: 7.30 Min: 5.60
2	9 inches	41 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60
3	41 inches	76 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: No Other Soil Types

Surficial Soil Types: No Other Soil Types

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: No Other Soil Types

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Cornerstone Earth Group were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Historical Topo Map Report

01/12/18

Site Name:

Phase I ESA
10123 North Wolfe Road
Cupertino, CA 95014
EDR Inquiry # 5158480.4

Client Name:

Cornerstone Earth Group
1259 Oakmead Parkway
Sunnyvale, CA 94085
Contact: Stason Foster

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Cornerstone Earth Group were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:**Coordinates:**

P.O.#	118-71-2	Latitude:	37.328152 37° 19' 41" North
Project:	Vallco Cupertino	Longitude:	-122.014917 -122° 0' 54" West
		UTM Zone:	Zone 10 North
		UTM X Meters:	587271.86
		UTM Y Meters:	4131731.30
		Elevation:	182.00' above sea level

Maps Provided:

2012	1947
1995	1943
1980	1902
1973	1899
1968	1897
