# What are bike boulevards?

**Bike Boulevards** are designated streets with low traffic volumes and speeds, designed to enhance livability and safety for people walking and biking within the neighborhood.

.....

They are developed through a series of elements to achieve the following outcomes: **slow speeds, low traffic, safe crossings, and wayfinding.**

## Slow Speeds

Slow speeds increase the driver's reaction time and reduces the severity of crashes.

Speed Tables

Traffic Circles

Curb Extensions

Truck Aprons

## Low Traffic

Bike Boulevards are located on residential, low traffic streets. Low traffic reduces the potential for crashes and ensures higher comfort for those walking and biking.

Residential, Low Traffic Streets

## Safe Crossings

The highest rate of crashes occur at intersections. Safe crossings are key to improved safety.

Enhanced Crossings

Bicycle Push Button

## Wayfinding

Wayfinding indicates that the street is a shared street and reinforces the priority for people walking and biking.
